

Improve EMR adoption and reduce readmissions with ClinicalLINC

ClinicalLINC provides secure access to clinical information systems through a wall-mounted terminal adjacent to the bedside. An extension of Lincor's PatientLINC system, ClinicalLINC offers an additional health information access point to increase operational efficiency for clinicians without affecting patient applications. Lincor's powerful LINC Technology allows ClinicalLINC and PatientLINC to run simultaneously, without the need for a second computer processor.

HOSPITAL BENEFITS

Increase Satisfaction

- More meaningful interactions between clinicians and patients means patients are informed, engaged with their care, boosting satisfaction scores.
- Clinicians can share charts, scans and test results to help patients understand their condition and course of treatment.

Improve Outcomes and Reduce Readmissions

- Educational tools ensure patients understand their treatment, medications and discharge plans before leaving the hospital, helping reduce readmissions.
- Hospitals can monitor patient engagement with tutorials and provide extra education when needed.

Meet Meaningful Use Requirements

- The intuitive user interface and integrated access to hospital information systems saves clinicians time and effort, helping facilitate EMR adoption.
- Clinicians prefer the ease of patient-suite terminals to the hassle of transporting laptops or mobile workstations.

IMPROVE WORKFLOW AND ENGAGEMENT

- Bedside terminals save nurses 24.5% of their time spent documenting during a shift. ⁱ
- Patients involved in clinical decision making are more likely to adhere to medical recommendations and engage in health-related behavior change. ⁱⁱ

ClinicalLINC FEATURES

EMR Access

ClinicalLINC gives clinicians direct, secure access to a hospital's electronic information systems at the point of care. Clinicians use ClinicalLINC to view and update medical records, order and verify medication, and review a patient's latest scans and test results—right at the bedside.

Educational Benefits

ClinicalLINC helps integrate education into the patient encounter by providing a simple way to share a patient's health information. Paired with PatientLINC, ClinicalLINC lets clinicians control the medical or educational content displayed on the patient's monitor, providing easy patient viewing for discussion of scans, test results or other health information. Clinicians can easily select "prescribed" educational content through ClinicalLINC and monitor when a patient has viewed the required materials.

Administrative Tools

ClinicalLINC's optional bed-status management feature allows clinicians to easily update bed status to ensure bed availability data is current and facilities staff is notified of any issue requiring attention. Additionally, ClinicalLINC's housekeeping application provides a room cleaning checklist, fault/issue reporting and screen cleaning functionality that reduces the risk of cross infection by ensuring the entire touch screen surface is cleaned.

ABOUT LINCOR SOLUTIONS

We are the global leader in patient engagement technology for hospitals and health systems. Through our state-of-the-art platform, Lincor transforms the patient experience by bringing interactive education, communication and entertainment technology directly to the bedside. By empowering patients, we help hospitals achieve better patient engagement, satisfaction and clinical outcomes.

"Lincor's ClinicalLINC solution enables us to provide reliable, secure access to vital applications such as our picture archiving system (PACS) and patient records (EHR) at the patient bedside, supporting better diagnosis, treatment and management of patients."
